A guiding hand; a tender touch;
an understanding for all--in
return, we give you this--

Our dedication

Mrs. Jean Fletcher

In appreciation of your devotion to the students of Pitt Tech, we dedicate this 1967 TARHEEL TECHNICIAN to you, Mrs. Jean Fletcher.

Being a graduate of Hillsborough High School, having an A.B. in English at the U.N.C. at Greensboro, and an M. Ed. in Guidance and Personnel at the U.N.C. at Chapel Hill, Mrs. Jean Fletcher comes well qualified for her position as Guidance Counselor.

You have served willingly as advisor to our Student Council and Annual Staff. Your office is always open to each of us. We appreciate your sincere and honest dedication to us, the students of Pitt Tech.

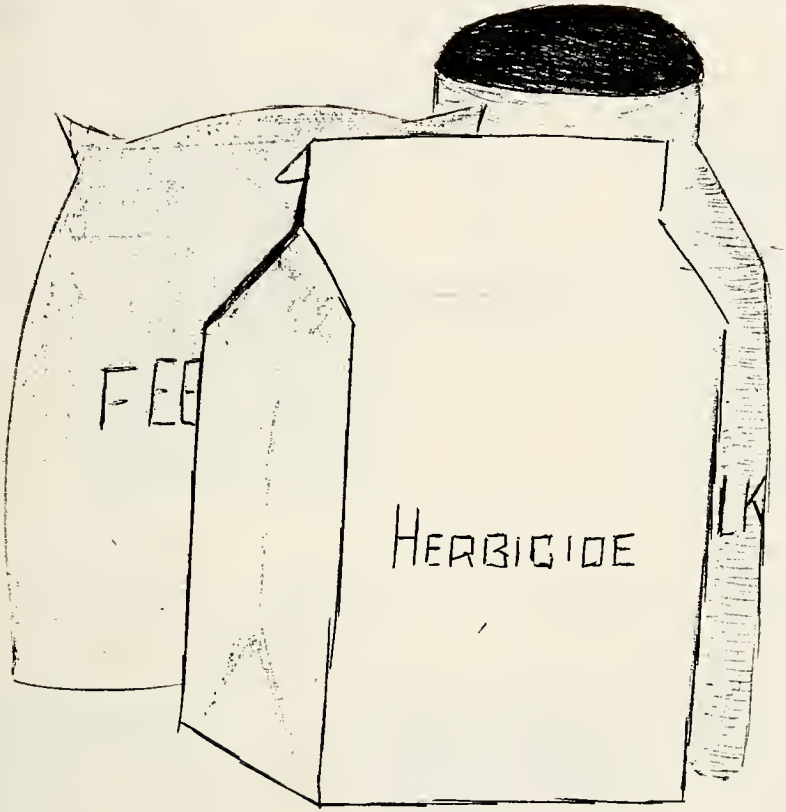
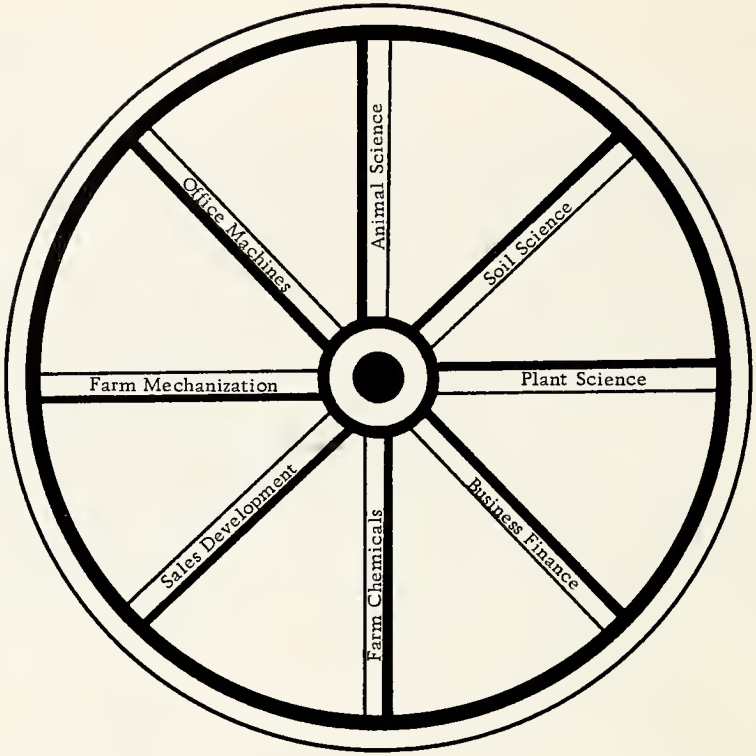
The Learning Lab helps to provide students the opportunity of a more comprehensive instructional program to fit individual needs. In the Lab students are able to study individually at both remedial and supplementary levels. The instructional procedure is further oriented to meet individual needs by allowing students to establish study schedules that are convenient for them during the hours the Lab is open.

Basically, four groups of students study in the Lab: (1) Those preparing to enter a technical institute or college, (2) those currently enrolled in a curriculum who need and desire study at levels or in areas not covered in the classroom, (3) those who desire general interest study and (4) those preparing to take the high school equivalency test.

Agricultural Business





Agricultural Technology Education consists of instruction that increases the competence of technicians engaged in the non-farming agricultural occupations. Emphasis is placed on the development of specific knowledge, understanding, concepts, attitudes, and skill essential for the technician in a non-farming agricultural occupation, or in the management role in the farm operations.

The curriculum is based upon a careful analysis of the educational needs of students who expect to be employed in agriculture or non-farming agricultural businesses, and the needs of these type of industries. Subjects in the curriculum are intended to train the student for employment in a variety of job opportunities in agricultural business, rather than for one specialized job classification.

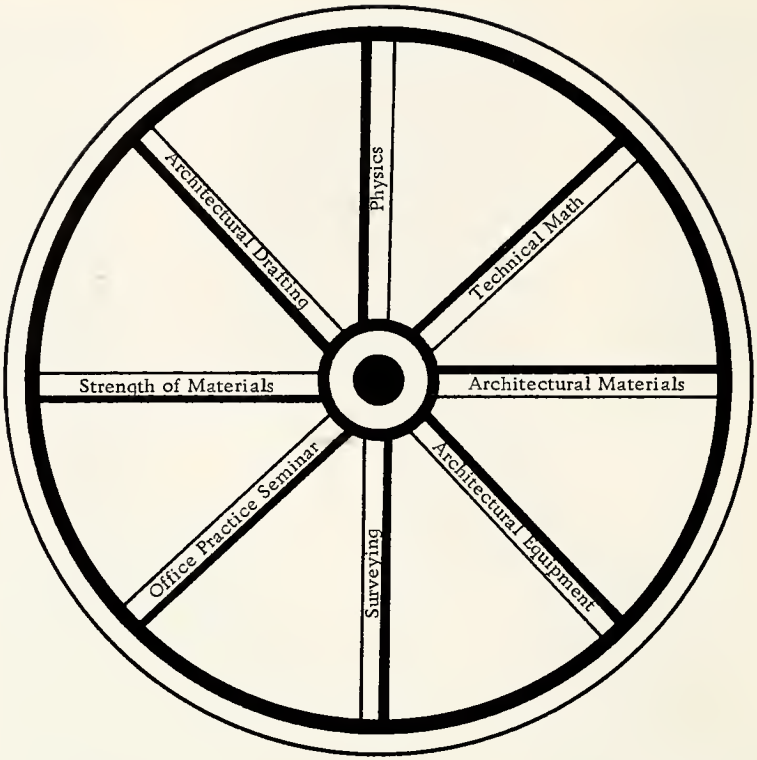
Drafting



The architectural draftsman must be able to prepare clear, complete, and accurate drawings and plans for schools, residences, hospitals, shopping centers, churches, ets. Some of the detailed work involved in this profession includes the ability to establish dimensions of parts, materials to be used, the relation of one part to another, and the relation of the various parts to the whole structure.

In order to carry out these duties, the architectural draftsman must possess skill in the use of drafting tools, making statistical charts, and making finished designs from sketches. In addition, he must have an over-all knowledge of various machines, engineering practices, mathematics, building materials, and the ability to communicate effectively with others.

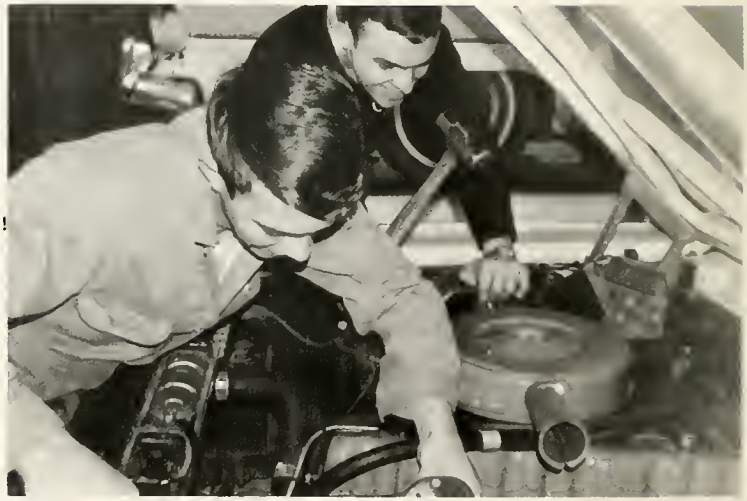
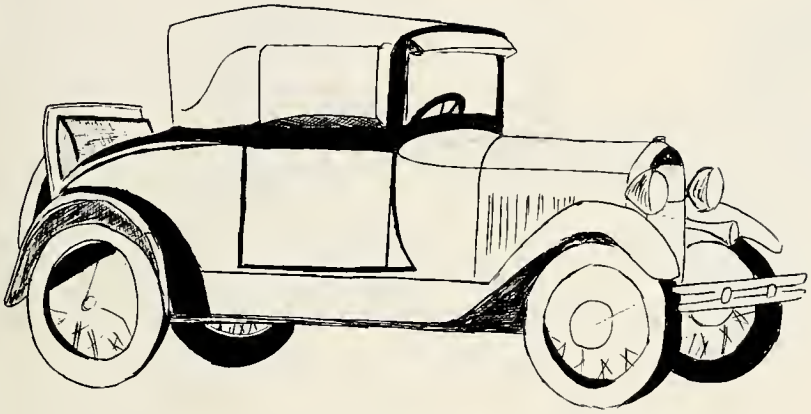
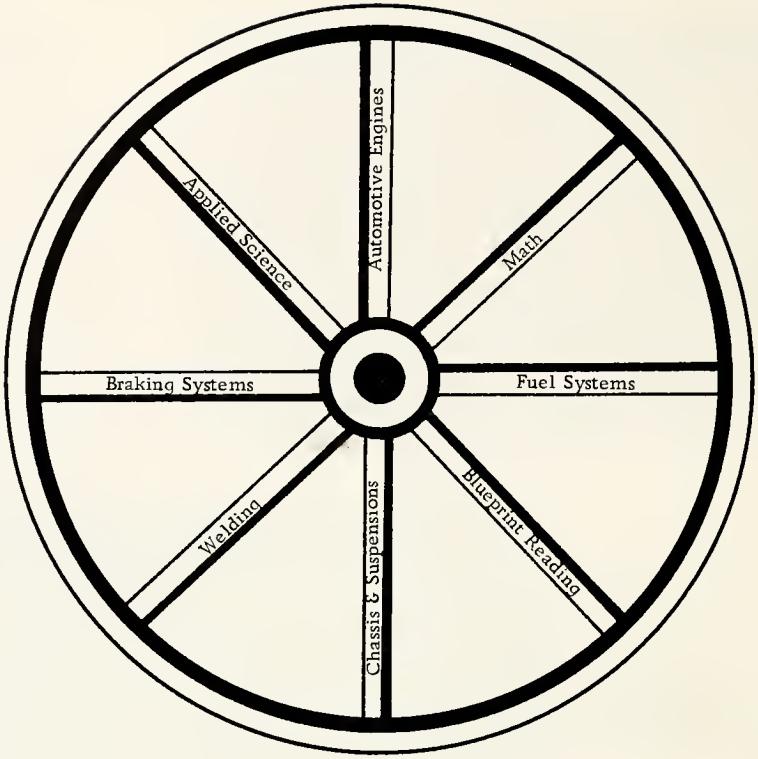
Hard at work

Wait a minute!





automobile mechanics



Since the automobile industry ranks in size with the largest and most universal industries, it is a source of many job opportunities. New scientific discoveries and changes in engineering and design make this a challenging and interesting career.

The curriculum at Pitt Technical Institute provides training for developing the basic knowledge and skills needed to inspect, diagnose, repair or adjust automotive vehicles. Manual skills are developed in practical shop work, while thorough understanding of the principles involved is covered in class discussion and assignments.

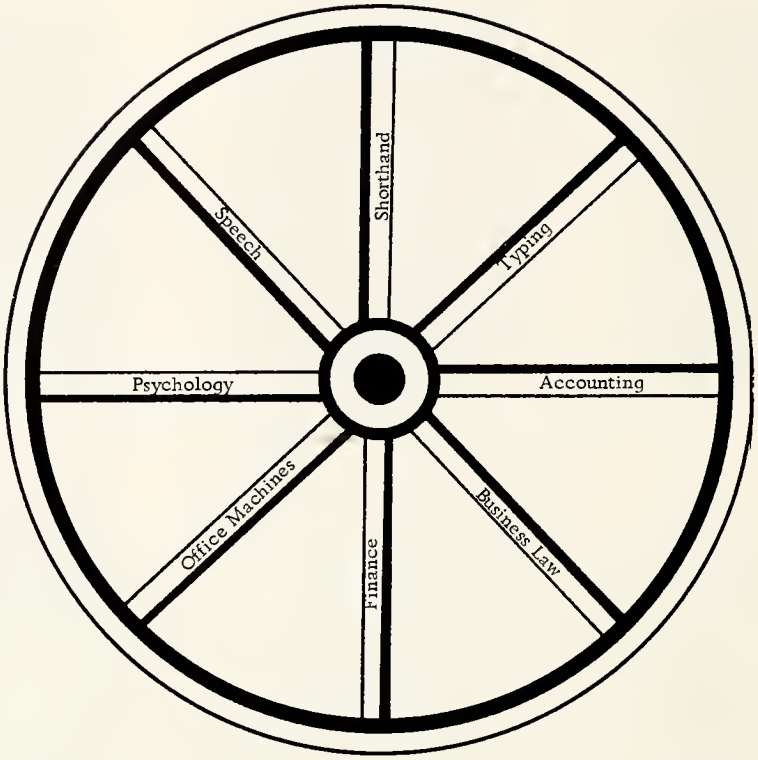
Business Education



All office personnel must have a thorough knowledge of the mechanics of the profession — typing and shorthand, letter writing, which necessitates good spelling, correct grammar, and sentence construction, and the various other tasks that make up office routine. It is the purpose of the business curriculum to train students to be proficient in these arts and to prepare them for positions in industry and business.

Some graduates of this program will qualify for employment as stenographers, technical secretaries, private secretaries, executive secretaries, and medical or legal secretaries. Others may qualify for positions as supervisors or administrators on a technical level.

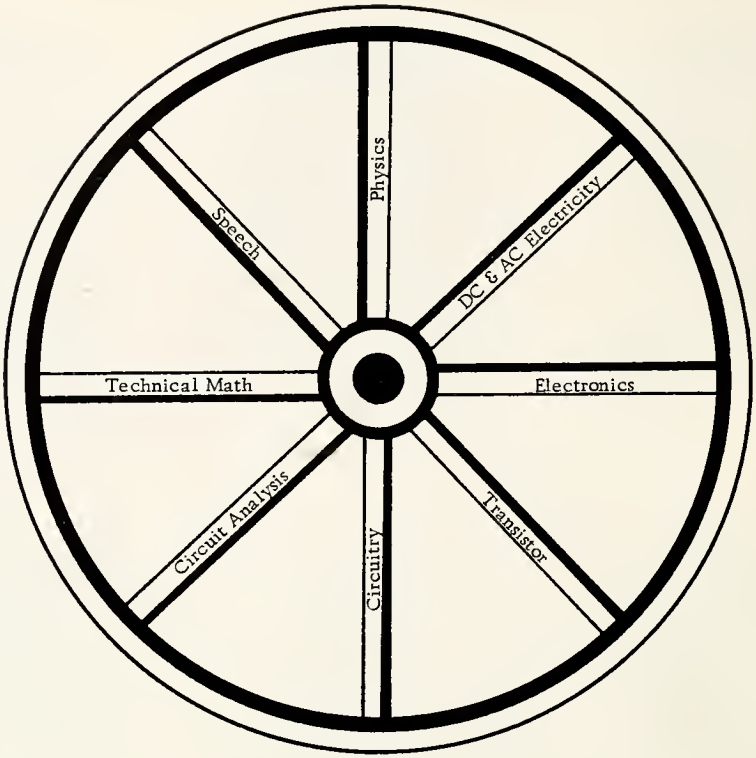
Electronics



The Electronics Technology Program gives the student a complete technical background in electronic principles and the methods of applying these principles in the five major groupings of Electronics: Servicing, broadcasting, communications, industrial and military. Within these groups and over-lapping from group to group there are many employment opportunities. The basic concepts, circuits, test equipment, and their use in the electronics field are presented in theory, by demonstration, and through extensive lab work which assures the student's technical skill and experience. This time-proven way of training, combined with actual experience using test equipment, trains the student in the "know-how" to a level of technical ability that is in demand and makes his progress most rapid.

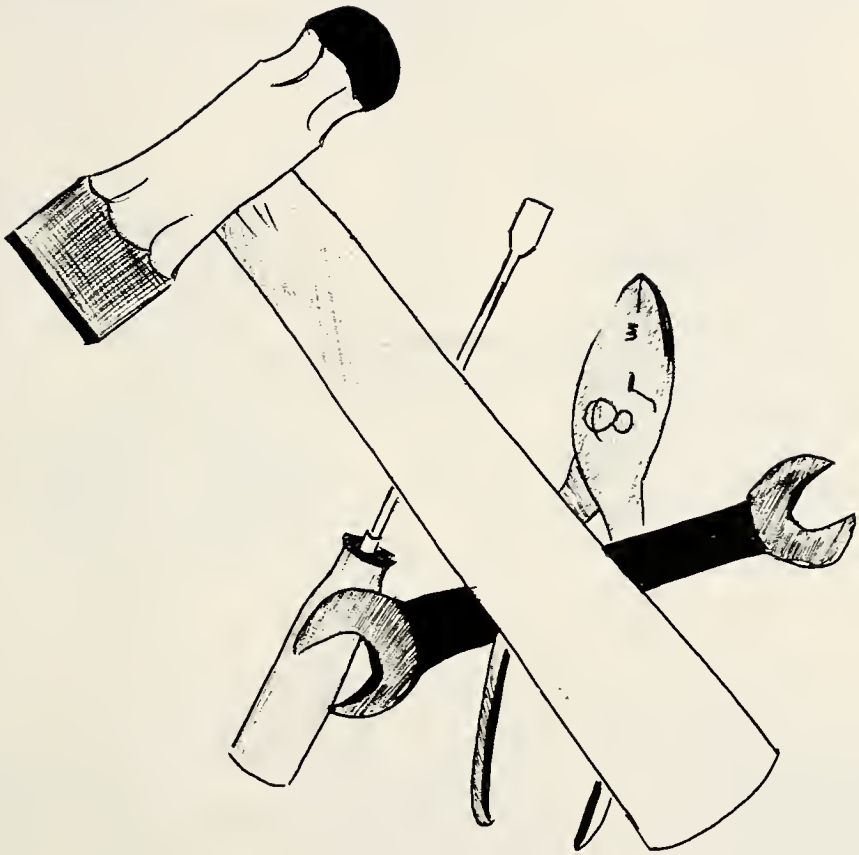
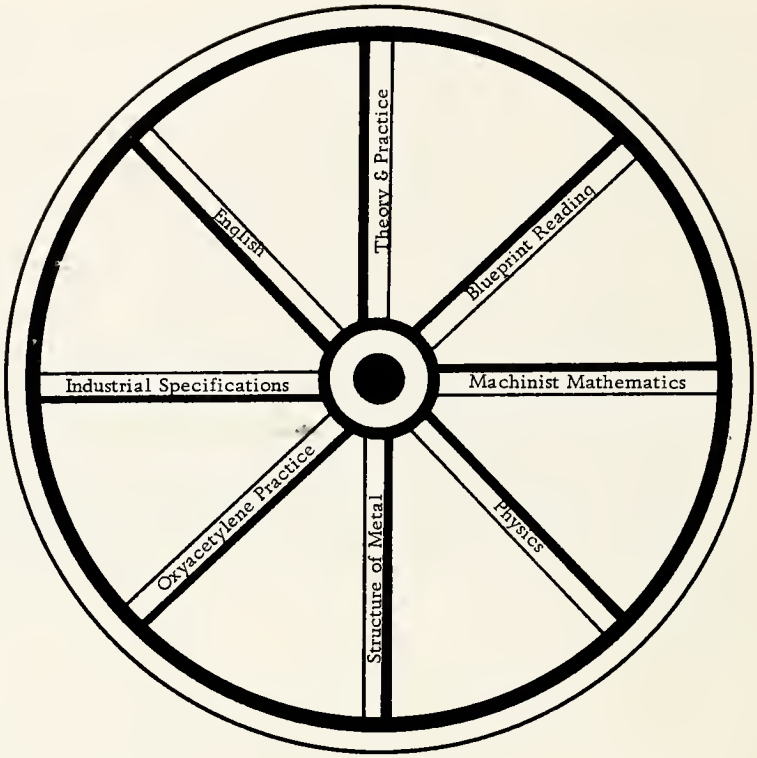
Visitors



machinest



Surveys recently completed in North Carolina show that many of the existing industries lack time and facilities for training enough machinists to meet present and planned needs. This course is designed to give students the opportunity to acquire basic skills and the related technical information necessary to gain employment and build a profitable career in the machine shop industry in the State.

The student is taught to carry through to completion the construction and repair of metal parts, tools and machines. He is trained in the use of all machinist's hand tools, as well as the knowledge of setting up and operating all machine tools. Not only is he taught to be proficient in machine shop, but in related subjects as well.

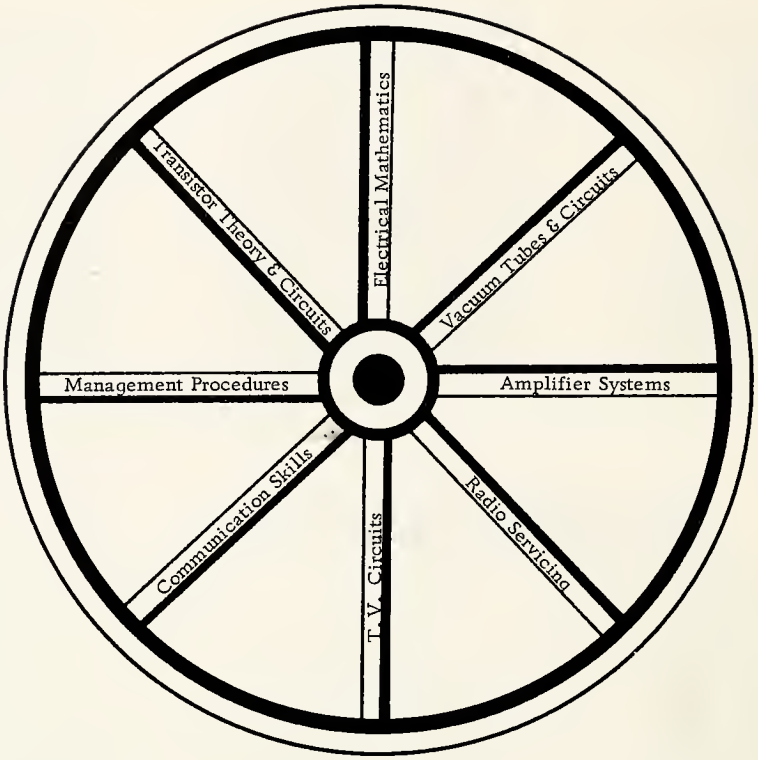
Radio & TV Repair



This is a fast-growing and ever-changing field of work. Color television, transistors, and printed circuits are just a few of the many developments affecting the future of men engaged in electronics production and maintenance jobs.

To be able to do this work, young men must have the ability to do considerable work in mathematics and science. Practical laboratory work is alternated with related instruction, in order to provide the essentials to mastery of this field.

The laboratory is adequately equipped to bring out the fundamentals of radio theory. Instruction is given in the use of voltmeters, ammeters, ohmmeters, tube testers, oscillators, oscillascope, signal generators and other related instruments.

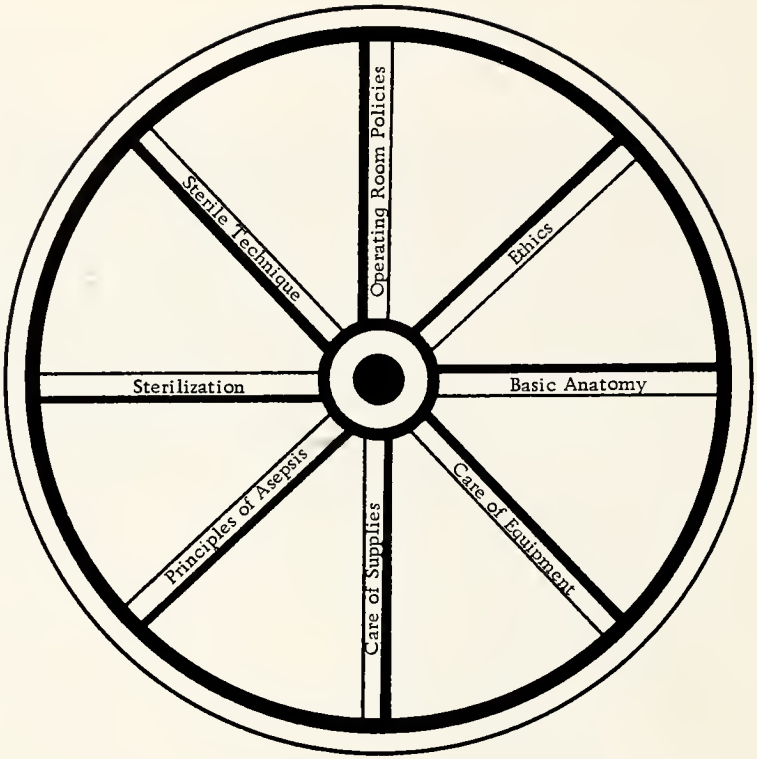
Surgical technicians



A surgical technician is a selected person who, through a well-planned and well-organized course of instruction, is prepared to function intelligently under the direct and continuous supervision of qualified professional nurses within hospital areas intimately concerned with the principles and practices of surgical asepsis, i.e., operating room, delivery room, emergency room, and central service department.

WILLIAMSTON, N. C.

A view of Mrs. Fletcher's world.

Monkey see, monkey do.

The ingredients of an annual are varied and often hard to find. A good staff is a must and they must cooperate willingly. I would like to take this opportunity to thank each person that worked to make this book possible. The purpose of this annual is to preserve memories and events of this year. If we have done this, all of our efforts and hard work have achieved their ultimate goal.

The annual staff wishes to express sincere appreciation to all who have contributed to the publication of the 1967 Tarheel Technician. Without the support of our advertisers this would not have been possible.

Betsy B. Hardison
Editor

When memory keeps me company

And moves to smiles or tears,

Worn pages of my annual

Dispel the mists of years.
